DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C.
 121:

- 1. Claims 1-4, 5, 6 and 24-36 drawn to imaging a customer and purchased item information to provide a correlation, classified in 705 subclass 10.
- II. Claims 7-12, 13 and 14, drawn to distinguishing between purchasers and non-purchasers using images, classified in class 382, subclass 418.
- III. Claims 15-21, 22 and 23 drawn to imaging customers and noncustomers to count their visits to a shop, classified in class 705, subclass 10.

The Inventions are distinct, each from the other because of the following reasons:

2. Group I to II

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method of imaging a customer and purchased item information to provide a correlation and can be conducted without distinguishing between purchasers and non-purchasers using images.

Application/Control Number: 09/904,528

Art Unit: 3623

Further one does not need to distinguish between purchasers and non-purchasers using images in order to image a customer and purchased item information to provide a correlation. The subcombination has a separate utility such as distinguishing between purchasers and non-purchasers using images. See MPEP § 806.05(d).

3. Group I to III

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method of imaging a customer and purchased item information to provide a correlation and can be conducted without imaging customers and non-customers to count their visits to a shop. Further one does not need to image customers and non-customers to count their visits to a shop in order to image a customer and purchased item information to provide a correlation. The subcombination has a separate utility such as imaging customers and non-customers to count their visits to a shop. See MPEP § 806.05(d).

4. Group II to III

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II

Application/Control Number: 09/904,528

Art Unit: 3623

has separate utility such as a method of distinguishing between purchasers and non-purchasers using images, and can be conducted without imaging customers and non-customers to count their visits to a shop. Further one does not need to image customers and non-customers to count their visits to a shop in order to distinguish between purchasers and non-purchasers using images. The subcombination has a separate utility such as imaging customers and non-customers to count their visits to a shop. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for each of the Groups I, II and III is not required for each of the other groups (i.e., I, II), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 3623

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan G. Sterrett whose telephone number is 571-272-6881. The examiner can normally be reached on 8-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tariq Hafiz can be reached on 571-272-6729.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
